

***** Hidden Field article *****

Hi,

In this article i discuss about how to manipulate the hidden field using jquery.

View:-

```
@{
    ViewBag.Title = "Hiddenfield";
}

<script src="../../Scripts/jquery-1.7.1.js"></script>

<h2>hidden field</h2>

<input type="hidden" name="hdnfld_message" data-message="@ViewBag.message" />

<input type="button" id="btn_getmessage" value="Get Message" />

<script type="text/javascript">

    $(function () {

        $('#btn_getmessage').click(function () {

            alert($('#input[name="hdnfld_message"]').data('message'));
        });
    });

</script>
```

Controller:-

```
public ActionResult Hiddenfield()
{
    try
    {
        ViewBag.message = "Welcome to ASP.NET MVC";

        return View();
    }
    catch (Exception)
    {
        return null;
    }
}
```

***** END *****
